Professional Summary

Full Stack Developer with 3+ years of experience engineering scalable web applications and robust APIs using React, Node.js, Python, Express, and FastAPI. Proven track record in database design, optimization, and management using PostgreSQL, ClickHouse, MySQL, MongoDB, and Supabase. Expert in implementing secure RBAC systems, global-ready features (multi-timezone/multilingual), real-time communication protocols, and AI-powered Retrieval-Augmented Generation (RAG) pipelines. Proficient in cloud deployments using Docker, CI/CD pipelines via GitHub Actions, and AWS ecosystem services.

Experience

Full Stack Web Developer | SLASHASH TECH LLP

Sep-2023 - Present
Jodhpur(Raj.)

Company website

- Optimized complex database queries and indexing strategies, achieving up to a 72% improvement in data retrieval and query performance.
- Migrated asynchronous background processing architecture from Bull Queue to AWS SQS, expanding support for multiple decoupled workloads while boosting reliability and scaling metrics.
- Architected global application compliance features, including system-wide multi-timezone support and localization frameworks for multilingual rendering.
- Developed low-latency, real-time internal communication platforms utilizing persistent WebSocket connections.
- Built and engineered an AI-driven automated appointment booking engine to process and schedule user requests via intuitive conversational chat interfaces.
- Collaborated in an Agile development environment to resolve blocking issues, conduct peer code reviews, and maintain clean architectural standards.

Web Development Trainee | AlmaBetter

Nov 2022 - Aug 2023
Remote(Bengaluru)

Company website

- Gained intensive hands-on experience building foundational full-stack software components using HTML5, CSS3, JavaScript (ES6), Node.js, Express, MongoDB, and relational SQL ecosystems.
- Designed and executed web application architectures utilizing React.js for dynamic UI rendering and decoupled Express.js REST APIs for back-end computing.
- Implemented software security best practices, incorporating JWT user authentication, session tokens, and cryptographic data encryption layers.
- Graded in the top 5% of a competitive educational cohort containing over 200 software students.

Projects

AI Retrieval-Augmented Generation (RAG) System

July 2025

an AI RAG for text documents which can reply accordingly

- Production-grade RAG pipeline enabling semantic document search and context-aware responses.
- Engineered an AI-powered RAG pipeline utilizing Google Embedding Models, LangChain orchestration framework, Supabase, and Node.js.
- Designed a scalable backend vector architecture to parse, chunk, store, and query high-density document datasets with minimal latency.
- Configured PostgreSQL/Supabase via pgvector extensions to handle high-accuracy mathematical vector operations and semantic lookups.
- Developed automated localized multi-language translation query mechanics to support diverse natural language input profiles.
- Built out secure REST endpoints using Node.js to bridge client communication securely with underlying large language models.

Google Embedding Model, Supabase, Node.js, langchain, OpenAI, OpenRouter

World of Dev Tools

July-2024 - present

https://worldofdevtool.com/

- An open-source ecosystem featuring text formatters, code parsers, and query evaluators for modern developers.
- **Keywords/Skills:** React, Bootstrap, Monaco Editor, Render, Node.js, SQL, ExpressJS
- Architected a performance-focused suite of online utility tools utilizing React, Bootstrap styling frameworks, and Monaco Editor integrations.
- Built a supporting server layer via Node.js, Express, and structured SQL environments to efficiently manage shared snippet databases.
- Deployed development workspace distributions via Render, implementing regular automated health checks and logging metrics.

React, Bootstrap, Monaco Editor, Render, Node, SQL, ExpressJS

Education

Master of Computer Applications (MCA) | Mangalayatan University (Online) **2025-2027**

Certifications

Full Stack Web Development Course Certificate **July 2023**
Almabetter
web link

Skills

Languages & Frameworks

JavaScript (ES6+), HTML5/CSS3, React.js, Node.js, Express.js, FastAPI, LangChain

Databases

PostgreSQL, MySQL, MongoDB, Redis, Clickhouse

DevOps & Platforms

Docker, AWS (SQS), GitHub Actions (CI/CD), Git/GitHub, Postman, Render, Linux

Core Competencies

MERN Stack Architecture, Data Structures & Algorithms (DSA), REST API Design, Real-time WebSockets, Role-Based Access Control (RBAC), Application Localization
